# novigo technology srl

## Who we are

- Novigo Technology srl was founded in 2013 thanks to years of academic experience of the team in the management of operations, operational research, and machine learning, after having gained a good experience at industrial level in manufacturing companies in relation to APS tools for production planning and scheduling.
- From June 2014 he obtained the Spin Off title of the University of Genoa. Since 2013 it has been registered as Innovative Start Up in the appropriate register.
- The team consists of nine members, including three university professors and several University of Genoa Post-Doc.
- Novigo Technology srl is part of the Sedapta group which is the Italian leader in Sales & Operations Planning software in the manufacturing sector.

## Activities

- Novigo Technology srl offers services and products with high technological content aimed at manufacturing industries in order to increase their competitiveness with particular reference to the following areas: high performance analytics for manufacturing, advanced planning, scheduling & optimization systems, sustainable manufacturing solutions.

## Our services

- Novigo Technology provides advice on all the topics of Industry 4.0, in particular on simulation and optimization, which goes from the analysis of feasibility studies to the design and implementation of algorithms for the resolution of complex problems related to the manufacturing world.
- Novigo Technology is also part of SedApta Group, a new international group that provides IT solutions for the optimization of the supply and production chain, which allows manufacturing and industrial companies to be more competitive, productive and responsive to market needs through the enrichment of products, services and technologies that enable key ICT technologies.

## The product

- Novigo Technology developed its Smart Manufacturing Platform based on the Industry 4.0 paradigm. The pillars of this platform are an algorithm for scheduling production, one for planning, and one for demand forecasting.
- These algorithms can be offered as-a-service, they can be used in the cloud or installed on-premise. An integration with third-party ERP or MES products is possible.
